

No strings attached.

RMS Mobile is exclusively designed for the retail industry, who wishes to use the power and flexibility of a portable tool to manage its inventory. RMS Mobile is a portable inventory control system, where you can wirelessly access the information for all your items. It was developed to complement the Microsoft Retail Management System 2.0 making it one reliable and secure tool because of its 100% compatibility with our system.

RMS MOBILE FEATURES

Access to database in real time | Create new items | Take physical inventory | Verification of amount available
Price Verification | Regular Price Change | Change Special Sale Price | Verification of Alias | label printing (labels)
Create, edit and receive Purchase Orders | Create, edit and get Transfer Outs | Create, edit and get Transfer Ins

ITEM LOOK UP CODES

Quick and easy access to information from your items only using the scanner or manually enter the item code. Capability to see the code, alias, description, department, category, quantity, regular price and special price. Also edit prices, printed labels and much more.

RECEIVING

Increases efficiency of receipt by directly entering the amount received. Create new items, receive against P.O.'s. Upgrade description, price, supplier and reorder number. Extremely easy process resulting on a more effective receipt avoiding expensive mistakes when receiving merchandise.

PHYSICAL INVENTORY

Save time and money and improves accuracy in taking physical inventories. Automatically records the amounts using the item code barcode scanner. Compare stocks with actual data at the moment of taking inventory to create/report discrepancies.

PURCHASE ORDERS

Create, edit and / or receive Purchase Orders selecting supplier, products and quantities right on your laptop. RMS Mobile takes Purchase Orders created in the warehouse office, providing greater flexibility when generating, editing or receiving.
